PROCESS CONTROL AND AUTOMATION

## Macroview

MacroView is an integrated software solution for the acquisition, presentation and analysis of plant data and events.

It is a fully multi-tasking, multi-user system that includes an advanced graphical interface, extensive data logging and reporting facilities and external database interfaces.

When running on Unix servers the system is accessible using standard X terminal software, securely through the standard browsers and dedicated X terminals.

Remote access on Windows servers is done through Cytrix, Terminal Servers or any remote windows access software.

Standard systems come with the MacroView Navigator, Alarms and event logging, Message manager, history and archiving, a choice of PLC/RTU/DCS drivers and a DDE Server.
